

Silicon Carbide Polishing Stones

CS-M This premium green silicon carbide abrasive polishing stone has superb cutting abilities. A special bond makes CS-M non-loading with a medium soft hardness for excellent polishing. The sharp cutting edges of silicon carbide permit the use of this stone for finishing low tensile strength materials such as aluminum, cast iron, bronze and kirkite. Most polishers prefer to use a lubricant.

Color: Green

DIAMAX Diamond Compound

- DIAMAX diamond compound is formulated for a broad range of mold and die finishing work where both finish quality and productivity are important
- DIAMAX is a precise blend of manufactured and natural diamond. Manufactured diamond's toughness and extended durability is combined with the unsurpassed cutting capability of natural diamond. DIAMAX lasts longer and cuts faster
- Either water-based or oil-based thinners and lubricants solution can be used
- Has a stable carrier which assures particle suspension. The carrier flows freely, spreading the compound further. DIAMAX is less viscous than other products
- Produced from superior materials utilizing state of the art grading and compounding technology
